CS 4340 - Project 5

Austin Hester

December 05, 2017

Introduction

The goal of this project is to implement linear regression using validation and ridge regularization.

I did linear regression by matrix multiplication, so regularization does not seem to help much, if at all.

Our training data is:

Training Data	
X	У
-2	14
-1	11
0	10
1	11
2	14
3	19
4	26
5	35
6	46
7	59
8	74
9	91
10	110

Our y is given by

 $y = f(x) = x^2 + 10$

Animated GIF of 3-Fold Validation

The Code

```

Notes

a) Our training data.

Training Data		
X	yl	
-2	14	
-1	11	
0	10	
1	11	
2	14	
3	19	
4	26	
5	35	
6	46	
7	59	
8	74	
9	91	
10	110	

b) The equation of the line obtained in part (1) is:

$$y = 8x + 8$$

c) For the following data: turn 1 is the first 8 points, turn 2 is all but the middle 4 points, and turn 3 is the last 8 points. I know there are 13 points total, but 13 is prime and we can ignore 1 here or there.

$\lambda = 0.1$	$\lambda = 1$
MSE turn $1 = 746.262661375$	MSE turn $1 = 842.139472172$
MSE turn $2 = 197.356271565$	MSE turn $2 = 328.670923052$
MSE turn $3 = 523.109196851$	MSE turn 3 = 546.035469641
$E_{c.v.} = 488.909376597$	$E_{c.v.} = 572.281954955$
$\lambda = 10$	$\lambda = 100$
MSE turn 1 = 1182.93732293	MSE turn $1 = 2141.77756418$
MSE turn $2 = 1232.34933626$	MSE turn $2 = 5683.71920214$
MSE turn $3 = 1058.17326210$	MSE turn $3 = 5620.29574743$
$E_{cv} = 1157.81997376$	$E_{cv} = 4481.93083792$

- d) I chose $\lambda=0.1$ because it gives the lowest MSE (besides zero). Running ridge regularization on X over Y using $\lambda=0.1$ gives:
 - e) Our final equation of the line is:

$$y = 8x + 8$$

From w = [7.88759553, 8.01293266]

Example Run

Here is example output of a run of 3-fold validation

```
Non-regularized Linear Regression

         = 166.642125313
```

p.s. Both graphs looked the same. They differ very minutely. MSE of original differs from our last one by only 0.2. The ridge regression actually beats standard linear regression on MSE by a whopping 0.2.
